Secondly it had appeared from a preliminary discussion that the epoch 1904 was more advantageously situated for a decision between the two periods of 72 and 44 years, which appeared equally possible from the observations of 1891, 1901 and 1902 (see page 4). Lastly, at that time (January 1905) I had already completely measured the co-ordinates y on the plates of 1903, while those of 1904 had not yet been received from the Cape, and it was evidently much more economical to measure on these latter plates the co-ordinates required for the libration and the co-ordinates y at the same time, without taking the plate out of the measuring apparatus, than to measure the plates of 1903, which would necessitate a redetermination of the scale-value and orientation for every plate. The plates contain six exposures of...
